

Assignment 01 - SC 629

203011002

(i) Bug based algo
Flow chart

(ii) From bug based algorithm, once we find an obstacle in the path of reaching the goal, we can guide the bug to following below points.

- Circumnavigate the obstacle
(By moving along the tangential vector of the polynomial at that point we can Circumnavigate the obstacle).
- while circumnavigating we ~~are~~ are going to calculate the distance to goal position
(By Finding the distance between points)
or
(In case of straight lines we can directly find the at where we get minimum distance to goal by finding the ~~at~~ distance)
- ~~At the~~ At that point where we obtain ~~a~~ minimum distance we leave that ~~an~~ obstacle & leave the path

In this way we change from bug base to bug 1 algorithm.
